

GOVERNANCE & LONG-TERM SUSTAINABILITY CHARTER

Project: BiotechProject (High-Performance Health Architecture)

Model: Decentralized / Maintainer-Led

Version: 2.0 (Reference Implementation)

Last Updated: May 12, 2026

1. PROJECT GOVERNANCE MODEL (ARCHITECTURAL SOVEREIGNTY)

The project operates under a **Maintainer-Led Governance** model with a strict emphasis on **Architectural Decision Records (ADRs)** to ensure technical continuity and transparency.

- **Decision Making:** All major technical shifts are documented via ADRs to ensure historical context. This prevents "tribal knowledge" and allows new contributors to understand the rationale behind the architecture.
- **Open Contribution:** The project is structured as a **Multi-Maintainer Model**. We utilize "Contribution Tiers" (Contributor -> Committer -> Maintainer) based on consistent SRE-grade code quality and strict adherence to the **Zero-Framework Mandate**.

2. TECHNICAL SUSTAINABILITY (ZERO-FRAMEWORK LEGACY)

Sustainability is defined as **Resilience to Obsolescence**:

- **Vanilla JS Mandate:** By avoiding ephemeral JS frameworks, the project ensures the codebase remains functional and secure for 10+ years with minimal maintenance overhead.
- **Low Dependency Surface:** A strict "Zero External Dependencies" policy in production minimizes supply-chain risks and "dependency hell," making the project a low-risk, high-reliability asset for public health institutions.

3. FINANCIAL & INSTITUTIONAL SUSTAINABILITY

- **Multi-Pillar Strategy:** The roadmap relies on a mix of institutional infrastructure grants, mission-driven foundations, and community support through transparent sponsorship programs.
- **Peer-Review Layer:** Ongoing engagement with academic and technical partners provides a validation layer that ensures the project meets international clinical and accessibility standards (**WCAG 2.2 AAA**).

4. CONTINUITY & EXIT STRATEGY (PUBLIC INTEREST COMMITMENT)

To ensure long-term survival independent of individual contributors:

- **Digital Sovereignty Alignment:** Committed to the "**Public Money, Public Code**" principle. All documentation and code are licensed to be freely reusable, changeable, and redistributable.
- **Documentation-as-Infrastructure:** Every module is self-documented with SRE protocols. The project is structured for an immediate "fork and carry-on" by any entity, ensuring zero service disruption.
- **Strategic Oversight:** A "Steering Committee" composed of technical and academic partners oversees long-term strategic decisions to maintain the project's mission and technical integrity.
